

# IQView

## Network Display Panel

### Description

IQView provides unprecedented user interaction with the Trend system. It is the most intuitive interface Trend have produced, due to its contact and in turn context sensitive functionality. It is a self configuring, touch screen display designed to minimise engineering and simplify usage.

System access is provided via a navigator tree, enabling controller selection, and access to modules, graphs, alarms, and timezones.

IQView comes as standard with a colour screen, and RS232, Ethernet, and IQ proprietary network connections. The Economy version has a black and white screen and uses only RS232.

### Key Benefits

- Intuitive, easy to configure display minimises training
- Minimises engineering and commissioning costs
- Views tailored to users function maximises the utility of your BMS
- Designed for ease of installation in a wide variety of environments
- Engaging touch screen display

### Key Features

- Easy adjustment of knobs, switches, time zones & directories
- Ethernet, Trend network, RS232 connection options
- Surface or Rear panel mount versions
- Colour and mono display variants
- Self configuring on connection to network
- Communicates with all controllers on local or remote networks
